

# State and Huron – Chicago, IL

## State and Huron - On the Edge of River North

The clients of this residential project imagined a glass building with luxury boutiques and amenities which would also include a penthouse suite on the top floor for the owner. Valerio Dewalt Train architects were tasked in making it happen on this small footprint. They created the 26-story residential tower with a glazing-wrapped tower and Ceramitex® Sintered Ceramic facade in Arctic White at street level. The residence contains 101 rentable units and the penthouse on top. This luxurious building includes an outdoor swimming pool, sun deck, a grilling station and community dining area as well as a gym and media room.

**Project City:** 8 East Huron St, Chicago, IL

**Products:** Ceramitex®

**Industry:** Commercial

**Square Footage:** Ceramitex® 3,956 sq.ft.;

**Architect:** Valerio Dewalt Train

### The Architect

The Chicago office of Valerio Dewalt Train is based in the upper floors of the historic Boyce Building in the River North area. The staff are energetic, creative and passionate about design and its potential as an agent of change. They have a focus to creating healthy buildings that sustain the planet and strive to exceed expectations.

### 360° Advantage

Organization between Elemex and Engineered Wall Systems Midwest was important to ensure the proper areas were coordinated for design, fabrication and delivery. With close coordination between the two companies, Elemex and EWSMW were able to think outside of the box and produce panels that overcame production constraints which, in turn, allowed the clients desires for design to be met.
